Bistec Industry Readiness Construction Project – Project Summary Document

09-JUL-2026

Project Summary

Construction Price List, BSR & Payment/ROI System — Prototype Build

What we're building

A construction industry client currently runs pricing, estimating, and payment tracking through multiple Excel sheets — causing pricing errors, no visibility into when prices were last changed, and slow/manual ROI tracking. We're building a 3-module system to replace this. Full details are in the BRD; this doc is the quick-reference version for the prototype build.

The 3 modules (build in this order)

1. Price List & Rate Management

- Client can add/edit materials, labour, and supplier rates.
- Every add/edit auto-stamps a last-updated date & time — this is the #1 pain point, don't skip it.
- Items are grouped by category (materials / labour / suppliers).
- Needs search/filter by name or category.
- This module is the single source of truth — Module 2 reads from it, nothing is entered twice.

2. BSR (Building Schedule of Rates)

- Digital version of the client's existing Excel BSR sheet — one BSR per project/site estimate.
- Client adds materials to a project's BSR; rate is auto-pulled from Module 1 (no manual re-entry).
- Line totals and grand total calculated from quantity × fetched rate.

3. Post-Contract Payment & ROI Dashboard

- Every project runs through 5 fixed construction stages.
- Each stage has 3 payment milestones: Advance 50%, Interim 25%, Final 25%.
- Client manually sets each payment's status: Paid / Not Received / Paid via Cheque.
- Dashboard shows: payments received, payments made (expenses), outstanding payments, cheque payments.
- System calculates total expense and overall ROI (income vs. expense).

Key business rules to hardcode

Rule	Value
Construction stages per project	5 (fixed)
Payment milestones per stage	3 — Advance, Interim, Final
Milestone split	Advance 50% / Interim 25% / Final 25%
Payment status options	Paid / Not Received / Paid via Cheque
Rate update tracking	Timestamp on every create/update, auto-generated
